Html, css and php were used to design the emp\_prof\_panel form. Logged employees are attracted to this form and then they can have the service of the system. And also created the admin\_prof\_panel.php ,admin\_edit.php and users.php files.

The screenshot displays the 'Online Leave Management System Employee Panel'. On the left side, there is a user profile section with a circular avatar icon and the text 'Hi chathu'. Below this, there are four green buttons: 'User Info', 'Apply Leave', 'View Leave', and 'Update Info'. At the bottom of this section is a purple 'Log Out' button. On the right side, there is a table displaying the user's personal information:

NIC No	963201647v
First Name	chathu
Last Name	jaya
Gender	male
Telephone No	722227423
Birthday	2019-08-14
City	matara
Email	dimu@gmail.com

At the bottom of the page, there is a footer that reads: '© 2019 Inovation Way Of Working Corporation'.

- Functions :

The logged employees can see their personal information, update information, apply leaves and check out the leaves history through this emp\_prof\_panel form. And the admin\_prof\_panel form also works as the same. Administration can check out the details of employees and edit their details, can accept or reject pending leaves and check the leaves history of the company.admin\_edit and users form are attached to this admin\_prof\_panel form for the relevant tasks.

Html and css were used to design the admin\_login form. The administration of the company must login to the system via this form. Created admin\_view.php, applyleaves.php and completed.php files. Created leavemgt.sql file and it contains the database.

- Functions :

Administration of the company can log to the system via admin login form. They have to use their relevant adminID and password. Then they can proceed their work. In applyleaves.php file the employees can make leaves either casual or other. Completed.php file contains the history of leaves that can be seen by the administration of the company either they accept or reject the pending leaves. Data are gain from the database system to this form. And the leavemgt.sql is the database file that contains all the tables and their data collected from the relevant areas of the system.

Created the empreg.php file. A form was designed by using html and css as employee registration form in php file. The new employees who did not registered to the system have to register first via this form to continue their work. Also created the userinfo.php file and admin\_login.php file.

A screenshot of a web-based 'Employee Registration' form. The form is set against a dark blue background with a faint image of a globe and several glowing human figures. At the top center, there is a small icon of three people. Below the icon, the title 'Employee Registration' is displayed in pink. The form fields are as follows: 'User ID(ex: John0101)' with a placeholder 'Enter Your User ID'; 'Full Name' with a placeholder 'Enter Full Name'; 'Gender' with a dropdown menu showing 'Male'; 'Mobile Number' with a placeholder 'Enter Mobile Number'; 'Birthday' with a date picker showing 'mm / dd / yyyy'; 'City/Town' with a placeholder 'Enter Your City/Town'; 'Email' with a placeholder 'Enter Your Email'; 'Password' with a placeholder 'Enter Password'; and 'Repeat Password' with a placeholder 'Repeat Password'. At the bottom of the form is a red 'Register' button. The entire form is overlaid on a background image showing a hand holding a tablet with the same registration form displayed on its screen.

- Functions :

Employees can register to the leave management system by the employee registration form. They have to fill some areas and submit then. Then they can proceed to get the service form the system. The logged employees are visible to their details in the form of userinfo. The details are gained from the database according to the relevant employee ID. Admin\_login.php file is related to the admin login form and the administration have to log to the system via this form

Created the emp\_login.php file. A form was designed using html and css in the php file as the employee login form. The registered employees must log to the system via this form and then they can continue to their relevant work. Also created the logout.php and approve.php file.

- Functions :

The registered employees have to log to the system via Employee login form. They have to use their relevant ID and password. Then they can continue on applying leaves, updates the details and checkout the leaves that they have already had. Logout.php file is relevant to the logout button. When the employee apply this button, entire profile panel of that employee is closed and goes to the home page. Approve.php file is related with the admin\_prof\_panel. It contains the approval for the leaves from the administration.
